

How an idea is scored.

Every idea is scored out of 100 against the same five quality dimensions, so ideas can be ranked side by side. There are two tracks, because two kinds of ideas come in:

Portfolio Company Build · at one of our companies

Specialist Build · an internal tool for our teams

Opportunity Quality · 65

Investment Priority · 35

Opportunity Quality · 100

A **portfolio company build** also weighs how much the firm has at stake at that company (Investment Priority, 35 points). A **specialist build** is an internal capability for our own teams, so there is no portfolio company at stake and the whole score is opportunity quality. Because the two are weighted differently, the app labels each score by type and does not treat them as directly comparable.

The components and their weights, side by side

COMPONENT	PORTFOLIO BUILD	SPECIALIST BUILD
Business Impact How meaningful the outcome is	17	27
Time to Artifact How fast something usable can reach users	17	27
Data Feasibility How accessible and clean the data and systems are	13	20
Sponsorship & Pull-through Ownership, commitment, likelihood of adoption	9	13
Strategic Fit & Repeatability How reusable the solution is	9	13
Opportunity Quality subtotal	65	100
BC Investment Priority The company score: equity check, remaining value, fund runway	35	not applicable
Total	100	100

Both tracks lean hardest on impact and speed. The specialist track simply spreads all 100 points across the five dimensions, since there is no company weighting to make room for.

The five quality dimensions.

Both tracks score these same five, each from 1 to 5, against a written rubric so grading is consistent from one reviewer to the next. Each score contributes **(score ÷ 5) × weight**. The two weights shown are **portfolio** and **specialist**.

Business Impact

17 portfolio · 27 specialist

How meaningful is the potential outcome?

1 Convenience for a few people, no measurable KPI or P&L movement 5 Changes economics or competitive position, leadership visibility

Time to Artifact

17 portfolio · 27 specialist

How quickly can something usable and testable reach users? Faster scores higher.

1 12+ weeks to a usable artifact 5 Usable artifact within days to two weeks

Data Feasibility

13 portfolio · 20 specialist

How accessible, clean, and tractable are the required data and systems? Lower friction scores higher.

1 Data missing, on paper, or owner unknown 5 All data confirmed, accessible, clean, and current

Sponsorship & Pull-through

9 portfolio · 13 specialist

How strong is ownership, sponsorship, and the likelihood people actually adopt it?

1 No named sponsor or owner 5 Executive sponsor, users asking for it, adoption in someone's goals

Strategic Fit & Repeatability

9 portfolio · 13 specialist

How strategically relevant is it, and how much leverage would solving it create elsewhere?

1 One-off with no reuse anywhere 5 Reusable across the firm or portfolio in waves

Same questions, wording tailored to each track. The exact 1 to 5 rubric is phrased for the context. For a portfolio build, examples talk about portfolio companies; for a specialist build, they talk about our internal teams. Reviewers see the full rubric inside the app, and an administrator can edit it.

Investment Priority: the extra 35 for portfolio builds.

This part applies only to portfolio company builds. It is the company score shown on the Investment Priority page, reflecting how much the firm has at stake and how much room remains to create value. It is set by the admin team from fund data, not self-reported, and averages three inputs each scored 1 to 5.

Equity Check Size 1 = SMALLEST · 5 = LARGEST
How large our equity position is, ranked against the rest of the portfolio (top fifth = 5, bottom fifth = 1).

Remaining Value-Creation Opportunity 1 = MOSTLY REALIZED · 5 = SUBSTANTIAL UPSIDE
How much value is still on the table, from the company's current value ranked against the portfolio.

Ownership / Value-Creation Runway 1 = NEAR EXIT · 5 = LONG RUNWAY
How long we expect to hold, mapped to fund vintage: Fund XIV = 5, Fund XIII = 4, Fund XII = 2, Fund XI = 1. Newer funds are prioritized.

Investment Priority (1 to 5) = (Check Size + Remaining Value + Runway) ÷ 3
A simple average, no hidden multipliers. It then contributes to the overall score as (Investment Priority ÷ 5) × 35 points.

The score across real portfolio companies

COMPANY	FUND	CHECK	VALUE	RUNWAY	PRIORITY
HealthEdge	Fund XIV	5	5	5	5.00
athenahealth	Fund XIII	5	5	4	4.67
Zelis	Fund XII	5	5	2	4.00
Arxada	Fund XII	1	1	2	1.33

HealthEdge, athenahealth, and Zelis share the same large check and value. Fund vintage is what separates them: newer fund, longer runway, higher priority. Arxada sits low on all three.

Source. The equity check, remaining value, and fund data behind these inputs come from Natalie Wright's fund reporting. The data table is refreshed whenever new reporting is published, so Investment Priority stays current with the latest figures.

Adjustable and versioned. The three inputs are first derived automatically from each company's fund, check, and value. An administrator can override any of them at any time. Each change is saved as a new version, and scores already calculated keep the version they used, so history is never rewritten.

Two examples, side by side.

The same five dimension scores, run through each track. Notice how the different weights, and the presence or absence of Investment Priority, change the total.

Portfolio Company Build

A hypothetical idea at athenahealth (Investment Priority 4.67).

COMPONENT	SCORE	WEIGHT	POINTS
Business Impact	4 / 5	17	13.6
Time to Artifact	4 / 5	17	13.6
Data Feasibility	3 / 5	13	7.8
Sponsorship & Pull-through	5 / 5	9	9.0
Strategic Fit & Repeatability	4 / 5	9	7.2
Opportunity Quality		65	51.2
BC Investment Priority	4.67 / 5	35	32.7
Portfolio Priority Score		100	84

Specialist Build

A hypothetical internal tool: first-pass deal-screening memos for the deal team. No portfolio company, so no Investment Priority.

COMPONENT	SCORE	WEIGHT	POINTS
Business Impact	4 / 5	27	21.6
Time to Artifact	5 / 5	27	27.0
Data Feasibility	4 / 5	20	16.0
Sponsorship & Pull-through	3 / 5	13	7.8
Strategic Fit & Repeatability	4 / 5	13	10.4
Specialist Priority Score		100	83

Scores rank, humans decide. Every score is fully inspectable: a reviewer can open it and see each dimension, the weight, the rationale, and any company inputs. The score orders the ideas to inform the discussion. It never decides on its own. Approvals and delivery assignments are always a human call in governance.
